

BEMNET KIBRET

FULL-STACK & FRONTEND ENGINEER

bemnetkibret4@gmail.com • +251 929 177 999 • Addis Ababa, Ethiopia (100% Remote) • [GitHub](#) • [LinkedIn](#) • [Portfolio](#)

PROFESSIONAL SUMMARY

High-velocity Full-Stack & Frontend Engineer specializing in architecting responsive, accessible web applications and reliable end-to-end cloud platforms. Proven track record of building production web systems using TypeScript, Next.js (App Router, Server Components), React, and Tailwind CSS, backed by robust PostgreSQL and Node.js services. Experienced in reducing API response latency by ~35%, managing complex client/server state, and authoring rigorous Jest/Playwright test suites. Dedicated to shipping clean, high-performance user interfaces with zero-downtime full-stack execution.

EXPERIENCE

Full-Stack Software Engineer | Senselet (Enterprise SaaS Platform) 2024 – Present

- **Modern Web Application Architecture:** Architected and launched responsive multi-tenant web application dashboards handling 10k+ SKUs and real-time inventory management across commercial retail clients, eliminating 20+ hours of weekly manual auditing.
- **Frontend State & Real-Time Sync:** Engineered client-side state architectures using React Query and Zustand paired with Supabase real-time WebSockets; delivered optimistic UI updates, sub-second search filtering, and seamless offline-first caching.
- **Full-Stack API Integration:** Built containerized Node.js and Python API services on AWS with PostgreSQL; authored strict schema migrations and Row-Level Security (RLS) ensuring 0% data corruption across multi-location warehouse operations.
- **UI Performance & Design Systems:** Implemented modular component design systems using Next.js App Router, React 19, and Tailwind CSS, achieving 95+ Google Lighthouse scores across desktop and mobile devices.
- **Feature Velocity & Testing:** Instituted automated end-to-end and component testing pipelines with Playwright and Jest in GitHub Actions CI/CD, maintaining rapid continuous deployment cycles.

Full-Stack Developer (Contract) | Marvels Creative Technology March 2025 – June 2025

- **Next.js & API Optimization:** Architected and optimized 20+ RESTful API endpoints and Next.js server routes with TypeScript, slashing server response times by ~35% for enterprise client applications.
- **Component Architecture & UX:** Developed dynamic, component-driven client interfaces with React, Next.js, and modern CSS; ensured cross-browser responsiveness, high accessibility (a11y), and intuitive UX flows.
- **Database & Data Contracts:** Designed PostgreSQL schemas and Prisma ORM data models, establishing strict type-safe data contracts between client state and database with sub-100ms average query latency.
- **Automated CI/CD & Reliability:** Authored comprehensive automated test suites using Jest and Postman within GitHub Actions, achieving 99.5%+ deployment stability across production rollouts.

KEY PROJECTS & SYSTEMS

AGY Web Cockpit & Real-Time Command Center

- **Impact & Architecture:** Built a responsive, real-time command dashboard bridging WebSockets to autonomous coding agents; implemented live streaming responses, visual verification checkpoints with Playwright, and Cloudflare HTTPS tunneling.
- Tech:** Next.js, React, TypeScript, Tailwind CSS, Playwright, WebSockets, Python, Cloudflare

Automated Data Enrichment & Webhook Pipeline

- **Impact & Retrieval Optimization:** Built and deployed a production data processing microservice indexing 5,000+ records with semantic vector embeddings and structured extraction, cutting per-record processing cost by ~65%.
- Tech:** TypeScript, Next.js, Node.js, PostgreSQL, Vector Embeddings, REST APIs, Webhooks, AWS

TECHNICAL SKILLS

Languages & Core:	TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Python, SQL
Frontend Frameworks:	React 18/19, Next.js (App Router, SSR, SSG, Server Components), Zustand, React Query, Three.js
Backend & APIs:	Node.js, Next.js Route Handlers, Express, RESTful APIs, Supabase Edge Functions, Webhooks
Databases & Cloud:	PostgreSQL, Supabase (RLS), Prisma ORM, AWS (ECS, Lambda), Docker, Vercel, Render
Tooling & Workflows:	Git, GitHub Actions (CI/CD), Jest, Playwright, Postman, Vite, Linux, Cursor, Claude
