

BEMNET KIBRET

FOUNDING FULL-STACK & AI ENGINEER

bemnetkibret4@gmail.com • +251 929 177 999 • Addis Ababa, Ethiopia • [GitHub](#) • [LinkedIn](#)

PROFESSIONAL SUMMARY

High-agency Founding Full-Stack & AI Engineer specializing in taking complex, data-intensive platforms from zero to production. Expert in bridging scalable cloud infrastructure (**Python, PostgreSQL, Supabase, AWS**) with high-performance frontends (**TypeScript, Next.js**). Proven track record of architecting agentic backends for high-stakes real-time decisioning, resilient retrieval pipelines (RAG), and offline-first database systems across 157 strict migrations. Passionate about owning the full software lifecycle from day zero to replace manual operational bottlenecks with auditable, autonomous software.

EXPERIENCE

Founder & Lead Engineer | Senselet & Independent Solutions (Startup Venture)

2024 – Present

- Zero-to-Production Architecture:** Architected and deployed an AI-native enterprise ERP from the ground up on **AWS and Supabase**, scaling across **3+ commercial retail clients** to eliminate 20+ hours of weekly manual auditing across 10k+ active SKUs.
- High-Stakes Decisioning & Agentic AI:** Engineered a proprietary 15-tool agentic backend using native JSON-schema function calling and cascading LLM failover; automated **90%+ of routine reorder and financial allocation decisions**, cutting reconciliation turnaround from 45 min to <30 sec.
- Mission-Critical Data Integrity:** Designed an offline-first architecture utilizing a Dual-ID resolution layer via PostgreSQL; authored 157 strict migrations with org-scoped RLS to guarantee 0% data loss across 5+ warehouse locations and high-value stock matrices.
- Real-Time Data Pipelines & Cloud Infrastructure:** Built containerized **Python and Node.js microservices on AWS (ECS/Lambda)** with idempotent webhook handlers, maintaining sub-500ms execution latency and 99.9% deduplication reliability.
- High-Velocity Engineering Ownership:** Spearheaded rapid zero-to-one product iterations, combining domain-driven system design with modern AI-assisted tooling (Cursor, Claude) to model complex database schemas and ship production features 3x faster.

Backend Developer (Contract) | Marvels Creative Technology

March 2025 – June 2025

- API & Microservice Architecture:** Architected and optimized 20+ RESTful API endpoints and server-side routes using TypeScript and Next.js, reducing server response times by ~35% for enterprise client applications.
- Database & Data Pipelines:** Designed PostgreSQL schemas and query workflows using Prisma, ensuring strict data contracts, foreign key integrity, and sub-100ms average query latency.
- Testing & Reliability:** Implemented automated API test suites using Jest and Postman within GitHub Actions CI/CD pipelines, maintaining 99.5%+ deployment stability across production rollouts.
- Tech Stack:** TypeScript, Next.js API Routes, PostgreSQL, Prisma ORM, Node.js, Jest, Docker.

KEY AI & INFRASTRUCTURE PROJECTS

AGY Telegram Bot – Mobile AI Agent Cockpit

- Impact & Outcome:** Built and open-sourced a mobile command center bridging Telegram to autonomous AI coding agents; automated 100+ remote agent workflows, cutting approval-to-deployment turnaround by 40% with sub-2s streaming response latency.
- AI Evaluation & Infrastructure:** Implemented automated Playwright visual verification checkpoints, structured LLM output evaluation frameworks, and a cascading model router with dynamic Cloudflare HTTPS tunneling.
- Tech:** Python 3.12, Google Antigravity SDK, Playwright, LLM Evaluation Frameworks, Telegram Mini App API.

Automated Data Enrichment & Retrieval Pipeline

- Impact & Retrieval Optimization:** Built and deployed a production microservice processing 5,000+ records with **semantic search indexing and RAG retrieval pipelines**, achieving 99.2% extraction accuracy and cutting per-record enrichment cost by ~65%.
- System Design & Verification:** Integrated signature-verified webhook receivers, automated precision/recall evaluation routines for Gemini Flash Lite structured outputs, and idempotent PostgreSQL persistence.
- Tech:** Python, TypeScript, Node.js, Vector Embeddings / Semantic Search, REST APIs, Webhooks, AWS.

TECHNICAL SKILLS

Languages & Core:	TypeScript, JavaScript, Python, SQL, HTML5, CSS3, Tailwind CSS
Frameworks & Libraries:	Next.js, React, Node.js, Express, Fastify, Three.js
AI & Agentic Systems:	Agentic Workflows, Function Calling, Custom Orchestration, LLM Evaluation, RAG, Vector Stores, Semantic Search
Databases & Cloud:	PostgreSQL, Supabase (RLS, Edge Functions), AWS (ECS, Lambda), Docker, Render, Vercel, Cloudflare
Architecture & Workflows:	System Design, Microservices, Offline-First Sync, High-Availability Webhooks, CI/CD, AI-Assisted Tooling (Cursor, Claude)
